

# Boomerang – Vekoma

ROLLER COASTERS

## DETAILS

The Boomerang consists of a single train with seven cars, capable of carrying 28 passengers. The ride begins when the train is pulled backwards from the station and up the first lift hill by a catchcar.

After being released, the train passes through the station, enters a Cobra roll element (referred to as a boomerang by the designers), and then travels through a vertical loop. After being pulled up a second lift hill, the train is released to head backwards through each inversion once more, making the total amount of inversions per ride six.

The train slows down as it passes through the station backwards, and then comes to a complete stop in the station.

Manufacturer	Vekoma Rides Manufacturing B.V.
Model	Park Model
Length	Approx. 88 meters
Width	Approx. 30 meters
Height	Approx. 35 meters
Track Length	Approx. 285 meters
Trains	1
Seats	28 passengers
Hourly Capacity	Approx. 760 people
Availability	Immediately
