

Condor - Huss

MAJOR RIDES

DETAILS

Condor is made up of 4 arms with four 7 car wheels on each end. The cars are able to freely swing back and forth and riders sit in an inline style, meaning that one person is in the back and one is in front, not like most common log flume seating arrangements.

The 4 arms are attached to a drive motor in the center which rotates the wheels around the center of the ride and also climbs the tower.
