

Top Spin - Huss

MAJOR RIDES

DETAILS

The Top Spin consists of a passenger platform suspended between two counterweighted arms. The arms are turned by motors, while the platform generally only has brakes that are engaged and disengaged at various points of the ride cycle. A typical top spin program runs the main arm motors while engaging and disengaging the platform brakes so that it will rotate in exciting ways.

Refurbishment report with TÜV reports available.

Manufacturer	Huss Maschinenfabrik GmbH & Co. KG.
